NOKI

MANIFESTO & WHITEPAPER

VERSION 0.4 / SEPTEMBER 2026

NOTHING STAYS HIDDEN.

Do not trust. Verify.

STATUS **Pre-launch - launch scheduled**	LAUNCH **11 October 2026 - 12:00 UTC**
NETWORK **Solana**	PLANNED TOTAL SUPPLY **1,000,000,000 $NOKI**
PRESALE / PRIVATE SALE **None**	FREE TEAM ALLOCATION **0%**

A community-first project built in public, with verifiable systems, public wallets and equal access.

01 / FOUNDATION

A project designed to be verified.

1. Executive Summary

NOKI is a community-driven project in the Solana ecosystem. It is approaching public launch after establishing its brand, website, community systems, transparency infrastructure and operational framework in public. This document records the structure current in September 2026 and does not promise price appreciation, yield or returns.

- Public fair launch scheduled for 11 October 2026 at 12:00 UTC on Solana.
- No presale, private sale or free token allocation to founders or the team.
- Public transparency architecture includes named operational wallets and a Transparency Terminal.
- Watchers is evolving into Holder Watchers, combining verified NOKI holdings and qualified referrals.
- NOKI Verify is being developed as an on-chain quick-scan product and future ecosystem utility.

2. The Problem We Address

Many token launches begin with information asymmetry, hidden advantages, unclear allocations or communities formed only after the asset exists. NOKI reverses that order by building documentation, participation and verification infrastructure before launch.

3. Mission, Vision & Values

MISSION **Build a transparent, globally accessible and verifiable community.**	VISION **Keep communication, public data and execution consistent as NOKI grows.**
VALUES **Transparency, equal access, community, clarity, accountability and evolution.**	STANDARD **Important claims should become easier for anyone to inspect and verify.**

02 / LAUNCH STRUCTURE

Fair access. Public verification.

4. Launch & Token Structure

BLOCKCHAIN **Solana**	TICKER **$NOKI**
LAUNCH DATE **11 October 2026**	LAUNCH TIME **12:00 UTC**
PLANNED SUPPLY **1,000,000,000**	FAIR LAUNCH **100%**
PRESALE **0%**	PRIVATE SALE **0%**
TEAM ALLOCATION **0%**	FREE FOUNDER/TEAM TOKENS **No**

The official token address is not included because it does not yet exist as an official launch record. It will be published at launch through NOKI official channels. Any address shared elsewhere before that publication should be treated as unverified.

5. Public Commitments

- No promise of profit, target price, minimum value or return.
- No presale or private sale.
- No free token allocation to founders or the team.
- Official mint, supply and authority data will be published in verifiable on-chain form.
- Material operational changes will be documented publicly.
- Security-sensitive information may be disclosed only when doing so does not create avoidable risk.

Launch-Time Verification

VERIFY BEFORE INTERACTING

Confirm the token address on nokinest.com, inspect it through an independent Solana explorer, and verify authority and supply information before buying, transferring or connecting a wallet.

03 / TRANSPARENCY TERMINAL

Public systems should leave a trail.

6. On-Chain Transparency

NOKI Transparency Terminal is the public reference point for token data, authorities, declared operational wallets, rewards, buyback and burn activity, and official market information. Some records become available only after launch because they depend on the live token and on-chain transactions.

PURPOSE	PUBLIC SOLANA ADDRESS	ROLE
REWARDS POOL	`DDR1A8nhnGAHbk1hLNrqRbgsqGJ66ErUKqyAdQiN9QG9`	30% of creator rewards; Holder Watchers distribution source.
OPERATIONS	`DERwmcYqXcbpbDbx5eLp46rs8CQHmjHBjqp4GU2mJ6jj`	35% of creator rewards; public operating reserve.
BUYBACK & BURN	`EqM3PQvt3Zju2ghJ9MzrZu4mBR5YdkBSbMtid5A5nFd1`	20% of creator rewards; transparent buyback and burn activity.
EXCHANGE LISTING RESERVE	`J1QyTaoaLFTqWcrdKRcYBhKJyF8AkawjkJDJkaeKiV8d`	15% of creator rewards; reserve for potential centralized-exchange listing costs.

7. Creator Rewards Allocation

Creator rewards generated through the launch and trading infrastructure follow this public allocation framework. Transfers and balances can be inspected through the declared wallets.

35%	30%	20%	15%
OPERATIONS	**REWARDS POOL**	**BUYBACK & BURN**	**EXCHANGE LISTING RESERVE**
Infrastructure, operations and execution.	Monthly Holder Watchers distributions.	Transparent market buybacks and token burns.	Reserve for potential CEX listing requirements.

Future NOKI Verify proceeds may also support rewards, operations and buyback-and-burn activity. Any fee model and allocation rule will be published before activation; this is not current or guaranteed revenue.

04 / HOLDER WATCHERS

Hold. Invite. Participate.

8. From Watchers to Holder Watchers

Holder Watchers is the next version of NOKI community participation. Eligible weight combines verified whole-NOKI holdings with a capped monthly bonus from qualified referrals. It is not staking and does not require participants to transfer or lock tokens.

CUSTODY **Self-custody; tokens remain in the participant wallet.**	MINIMUM BALANCE **1 whole NOKI at the applicable snapshot.**
ACCOUNT RULE **One participating Solana wallet per account.**	OWNERSHIP PROOF **Wallet signature; no transfer or private key disclosure.**
REFERRAL BONUS **0.1% per qualified monthly referral, capped at 15%.**	REWARD ASSET **NOKI from the public Rewards Pool after launch.**

Monthly Weight Formula

PARTICIPANT WEIGHT

floor(verified NOKI balance) x (1 + monthly referral bonus)

Only whole NOKI count toward weight. A verified balance of 150,230.102912 contributes 150,230 NOKI before the bonus. Compact display formats may be used, but calculations use the full whole-token integer.

Public Ranking & Privacy

The public ranking may display the chosen public name, whole-NOKI balance, referral count and bonus, total weight, pool share and estimated reward. Wallet addresses and private account details are not intended to appear publicly.

05 / MONTHLY CYCLE

Calculated automatically. Reviewed before distribution.

9. Periods, Snapshots & Distribution

- Regular cycles follow calendar months in UTC.
- The first cycle runs from launch on 11 October through 31 October 2026.
- The closing snapshot is taken at 00:00 UTC on 1 November 2026; future cycles use the same month-end convention.
- The reward pool is the available whole-NOKI balance designated for that cycle.
- Balances, referrals, bonuses, weights, shares and estimates are calculated automatically.
- An administrative terminal generates an immutable review snapshot before payment.
- Distribution requires authorized human review and approval before batch submission.
- Distribution records and transaction references should remain auditable.

Deterministic Calculations

Holder balances are floored to whole NOKI before weighting. The final snapshot must disclose the exact pool, every eligible weight and the rounding method. Any undistributed remainder must remain traceable.

10. Migration & Historical Continuity

- The September 2026 Watchers cycle remains under its existing USDC reward plan and closes independently.
- Current Watcher profiles and referral history are preserved.
- Compatible Solana reward-wallet records may be reused, but participation requires ownership verification.
- Monthly qualified-referral counts reset; cumulative history remains stored for future achievement bonuses.
- Current Watchers are intended to migrate without losing historical participation records.

Snapshot Risk

INITIAL MODEL

The initial release uses the balance visible at the closing snapshot and imposes no holding-time lock. If manipulation becomes material, prospective safeguards may be introduced with public notice.

06 / PRODUCTS & GOVERNANCE

Transparency is a product, not a slogan.

11. NOKI Verify

NOKI Verify is an on-chain quick-scan experience under active development. It helps users inspect current Solana token data before trusting claims. Results may evolve as sources and methods are added, and do not replace independent research or professional advice.

12. Governance & Decision-Making

During the initial phase, execution remains the founding team responsibility. Community consultation and voting may be introduced gradually as the project and its security needs mature.

- Community topics may include content, languages, initiatives, integrations and product priorities.
- Technical, legal, treasury, custody and security decisions may require specialized execution.
- Participation does not remove the team duty to document decisions and protect operational security.
- Country or language representatives may support communication without automatic financial authority or token advantage.

13. Roadmap Status

PHASE	STATUS	SCOPE
PHASE 01 - FOUNDATION	Completed	Brand, website, manifesto, official channels and initial infrastructure.
PHASE 02 - COMMUNITY & PRE-LAUNCH	In progress	Watchers, Holder Watchers infrastructure, public transparency and launch preparation.
PHASE 03 - FAIR LAUNCH	Scheduled	Public $NOKI launch and official on-chain information.
PHASE 04 - TRANSPARENCY & GROWTH	Planned	Holder Watchers operation, terminal expansion, metrics and integrations.
PHASE 05 - ECOSYSTEM	Directional	Products, partnerships and initiatives based on verified progress.

07 / OFFICIAL REFERENCE

Use official sources. Verify independently.

Official Community - Telegram	https://t.me/NokiCommunityOfficial
Official Announcements - Telegram	https://t.me/NokiOfficialChannel
Contact	contact@nokinest.com

15. Risks & Disclaimer

Crypto assets involve significant risk. After launch, market participants determine the price of $NOKI, which may experience extreme volatility or lose substantial or all value. Smart-contract, blockchain, wallet, liquidity, operational, regulatory and third-party risks may also affect participation.

Nothing in this document or NOKI channels is financial, investment, tax or legal advice; an offer of securities; or a guarantee of returns. Each participant is responsible for independent research, wallet security and local compliance.

---

16. Manifesto

Trust is not built through promises.
It is built when anyone can verify what was promised.

NOKI builds the conditions for people to observe, inspect and verify. The project may change. The community may grow. Technology may evolve. The principle should remain.

WATCH. VERIFY. PARTICIPATE.

Nothing Stays Hidden.

Updated September 2026. Version 0.4.
